We have not derived benchmarks for any media, except for surface water and drinking water, which were obtained from the Office of Pesticide Programs (see attachment).

When AltEN asked us to do this analysis, the list they gave me were analytes we did not analyze for (meaning we don't have those standards). The matrix is terrible. We did the metals for NE AltEN last time and trying to get anything out of wet fermented corn, mash, and manure creates horrible matrix effects and low recovery with lots of J codes. Glad to look at the list and see if there is anything we can help with, but just wanted you all forewarned that the STC might not be able to help.

Not sure we could even contract it out since the REST contract is done and the new ESAT contract hasn't happened yet.

Importance: High

They will need pesticide analysis. They're just trying to determine if there's been a release.

Mike can you share the action levels for AltEn so that they can use those for the ESC (??) facility in Ks.

Same type as AltEn. Can you assign a couple of staff so that they can coordinate with Ed Buckner and Tim Evans.

This is a high priority front office project

Thanks
